

POZOR:

Za priklop energijskega stikala je potrebno odstraniti ohišja konektorjev, vodnike pa priklopiti glede na številke kontaktov. Staro in novo stikalo imata enake številke. Novo stikalo ima samo en kontakt za S1 in S2. V primeru, da je na starem stikalu priklopljena še signalna lučka, jo je potrebno prestaviti na kontakt na sosednjem stikalu.

ATTENTION:

For connection of the new energy switch it is necessary to remove the plug connectors from the original switch. Wires must be removed and connected according to the numbers of the contacts. Old and new switches have the same numbers. The new switch has only one contact for S1 and S2. In the case that the old switch has a signal lamp connected, it is necessary to connect the lamp wire to the identical contact on the nearest adjacent switch.
